

ENERGY TECH SOLUTIONS, LLC

ABOUT ENERGY TECH SOLUTIONS, LLC

Energy Tech Solutions, LLC was founded on the concept of creating a comprehensive, single source, LED lighting solution consisting of some of the best high-end, proven and tested LED products that exist today. Our team of very highly qualified lighting and energy professionals strives to find the companies who have succeeded in building truly quality products and brings those products to market through our growing network of direct accounts and distribution channels. Our goal is to gain a clear understanding of our customer's lighting needs and deliver a complement of products that serve those needs effectively and efficiently.

Focusing on LED products that are manufactured in North America or one of the NAFTA compliant countries, we hand-select each product we represent after thorough research of the product, manufacturer, potential applications, certifications, independent lab test results and competition. This is what separates Energy Tech Solutions, LLC from other LED sources, in that we know our products very well in comparison to other products on the market, we have strong relationships with our manufacturers, and we can provide technical analysis including Payback and ROI, environmental impact, energy calculations, photometric design and LEED Consulting to support your LED initiatives.

Our efforts remove the guesswork and risk from the buying process on behalf of our clients. We pride ourselves in developing strong long-term relationships with not only our various manufactures and LED sources but with our client base as well.

Energy Tech Solutions, LLC is a women-owned (WBE, WOSB Certified), small business and we can help you meet your small business goals.

MISSION STATEMENT

Our goal is to provide the most comprehensive selection of high quality LED lighting products that exist and supply our customers with a sound lighting solution that is sustainable, cost-effective and environmentally responsible.
